Credit Name: CSE 2140 2nd Language Programming
Assignment Name: Chapter 4 Mastery, PackageCheck.java

The following questions can help you in thinking critically about your problem-solving processes:

Understanding the Problem
How did you approach understanding the challenge?
Understanding how to check package size using volume formula
Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?
checking both (if/else if) together was a bit confusing

Planning the Solution
Did you create a plan or break the problem into smaller steps before coding?
I broke it into input//process//output//
How did you decide on the tools, data structures, or algorithms to use?
Used double, multiplication to solve for volume and use if else

Implementation
Did you write the code in small pieces or attempt the entire solution at once?
wrote the code in small steps, starting with scanner
How did you test your solution along the way to make sure it was working?
After writing few lines, i ran the program with simple numbers to check the output

Overcoming Challenges
What part of the problem was the most difficult for you?
the order of if else statements, so it outputs the “too heavy and too big” first
How did you handle moments when you felt stuck or unsure of what to do next?
looked back at previous program with if else statements

Learning
Was there anything you learned that you think will help you with future challenges?
learned more about how to use && and if statements together
